IST 659: Project Report

Gym Services Database Management

Author: Rucha Kadam
rpkadam@syr.edu

Under the guidance of Prof. Yang Wang.

1. Project Summary

The proposed project is for a Gymnasium (gym), to insert, delete or update information related to customers, trainers and to view the sales of a center. This project is designed for two branches of the gym located at two cities – Syracuse and Rochester.

This project will help the receptionist to enter details of a new customer and would assist him/her to register a new membership or even update an existing one. It will also help to find out the remaining dues of customers for a membership. The receptionist can register a new or an existing customer to new services. Viewing at the customers data and health conditions, he/she can provide them appropriate health services and plans provided by the company. This project will also help to renew a plan or membership.

This project also stores information of the trainers for a service the gym provides and the timeslot of their availability. The branch managers can view the most preferred trainers and can give them a hike to not lose a valued trainer in a competitive market.

The manager can also view at the sales reports and can roll out promotional offers or addons to their customers membership, thus increasing the sales respectively. This project is to ensure that the gym functions smoothly, helping to register customers and also to help managers increase the sales by providing offers to customers.

2. Entity and Attribute Tables

1. Customer

Attribute Name	Field Type	Null/Not Null	Attribute Type	Description
CID	Integer	Not Null	Primary Key	Unique ID of the Customer
CFName	Variable character	Not Null		First Name of the Customer
CLName	Variable character	Not Null		Last Name of the Customer
CEmailID	Variable character	Not Null		Email ID of the Customer
CPhone	Variable character	Not Null		Phone Number of the Customer
CGender	Variable character	Not Null		Gender of the Customer
CDOB	Date	Not Null		Date of Birth of the Customer
CAnniversary	Date			Anniversary of the Customer
CApartmentNo	Variable character	Not Null		Apartment number of the Customer
CStreetName	Variable character	Not Null		Street Name of the Customer
CCity	Variable character	Not Null		City of the Customer
CState	Variable character	Not Null		State of the Customer
CZip	Variable character	Not Null		Zip Code of the Customer

2. Trainer

Attribute Name	Field Type	Null/Not Null	Attribute Type	Description
TID	Integer	Not null	Primary key	Unique id of the trainer
TFName	Variable character	Not null		First name of the trainer
TLName	Variable character	Not null		Last name of the trainer
TDesignation	Variable character	Not null		Designation of the trainer

TEmailID	Variable character	Not null		Email id of the trainer
TPhone	Variable character	Not null		Phone number of the trainer
TGender	Variable character	Not null		Gender of the trainer
TDOB	Date	Not null		Date of birth of the trainer
TApartmentNo	Variable character	Not null		Apartment number of the trainer
TStreetName	Variable character	Not null		Street name of the trainer
TCity	Variable character	Not null		City of the trainer
TState	Variable character	Not null		State of the trainer
TZip	Variable character	Not null		Zip code of the trainer

3. Branch

Attribute Name	Field Type	Null/Not Null	Attribute Type	Description
BID	Integer	Not null	Primary key	Unique ID of the Branch
BName	Variable character	Not null		Name of the Branch
BPhone	Variable character	Not null		Phone Number of the Branch
BStreetNo	Variable character	Not null		Street Number of the Branch
BStreetName	Variable character	Not null		Street Name of the Branch
BCity	Variable character	Not null		City of the Branch
BState	Variable character	Not null		State of the Branch
BZip	Variable character	Not null		Zip Code of the Branch

4. Facilities

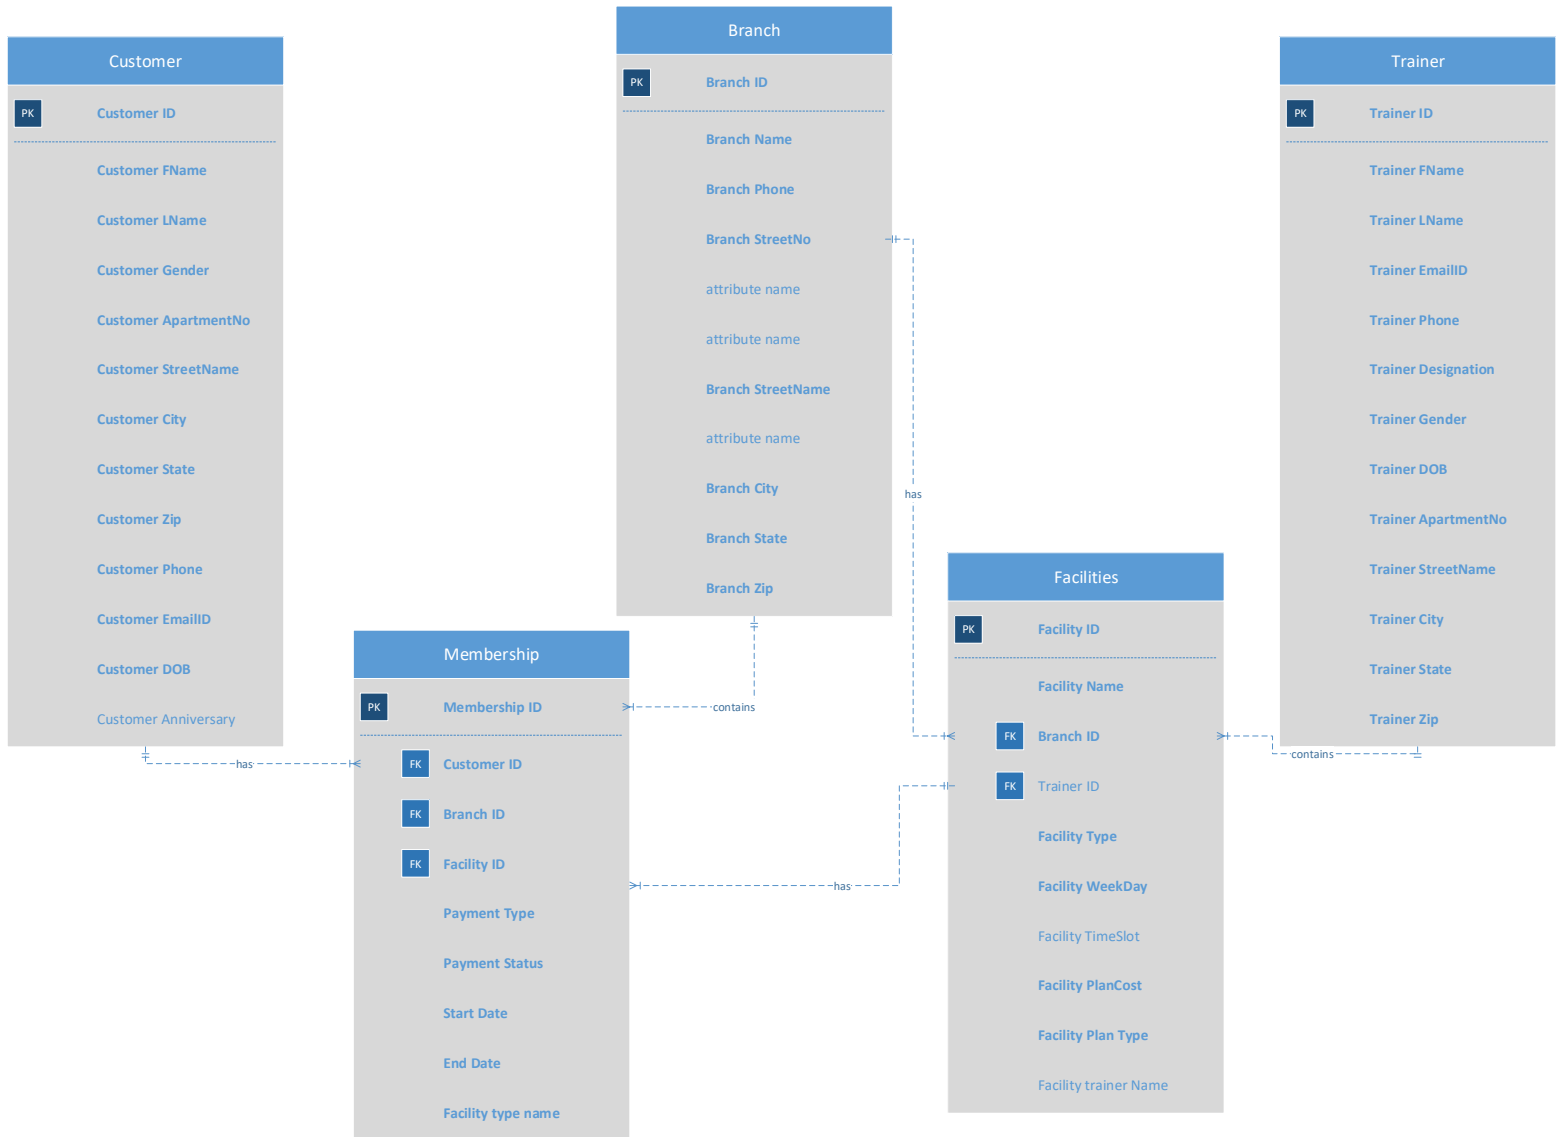

Attribute Name	Field Type	Null/Not Null	Attribute Type	Description
FID	Integer	Not null	Primary key	Unique ID of the Facility
FName	Varchar	Not null		Name of the Facility
F_BID	Integer	Not null	Foreign Key	Branch ID of the Facility

F_TID	Integer		Foreign Key	Trainer ID of the Facility
FType	Variable character	Not null		Type of the Facility
FWeekDay	Variable character	Not null		Day of the Facility
FTimeSlot	Variable character			Time Slot of the Facility
FPlanType	Variable character	Not null		Type of Plan of the Facility
FPlanCost	Variable character	Not null		Cost of the Facility
FTrainerName	Variable character			Trainer Name of the Facility

5. Membership

Attribute Name	Field Type	Null/Not Null	Attribute Type	Description
MID	Integer	Not null	Primary key	Unique ID of the Membership
M_CID	Integer	Not null	Foreign Key	Customer ID related to the Membership ID
M_BID	Integer	Not null	Foreign Key	Branch ID related to the Membership ID
M_FID	Integer	Not null	Foreign Key	Facility ID related to the Membership ID
M_PaymentType	Variable character	Not null		Payment type of the Membership
M_PaymentStatus	Variable character			Payment status of the Membership
M_StartDate	Date	Not null		Start date of the Membership
M_EndDate	Date	Not null		End date of the Membership
M_FType	Varchar	Not null		Name of the facility type Eg:zumba

3. Entity and Attribute Tables

4. Business Rules

1. One trainer can work at only one center.
2. One customer can have minimum one or more number of memberships
3. One facility can be given to only one customer by only one trainer in time slot in the facilities table if Facility Name is Personal Trainer/SPA/Jacuzzi.
4. One facility can be provided to a multiple customer by a single trainer in the same timeslot if the facility name is Yoga/Zumba/Pilates.
5. Time slots are in the span of 1 hour.
6. One customer can book only facility for one-time slot.
7. One customer can use at all the centers.
8. One trainer works as personal trainer and if not then as a regular instructor.
9. One timeslot can have multiple employees.

5. Database Infrastructure

This database system infrastructure used is based on a client-server model. SQL Server is used as the database engine and Access is used as the interface design tool. Data is inserted, deleted, updated, and queried from the SQL Server database with the help of forms on Access. Useful data stored on the SQL Server database can also be viewed with the help of reports generated through Access.

6. SQL Scripts for Creating Tables and Entering Sample Data

```
CREATE TABLE Customer
```

```
(
```

```
